SpeedForSale.com's Installation Guide Series:
SpeedForSale LED Front Side Markers/Signals for R35 GT-R

You can purchase this item here:

http://www.speedforsale.com/nissangtrparts/body-kits-panels-c-29_53.html

Difficulty:

Easy

Description:

This is an installation article that shows you how install and correctly wire our SFS LED Front Turn Signal Markers on your R35 GT-R.

Tools Needed:

- #2 phillips screwdriver
- Soldering tools if soldering desired

Installation instructions:

Step 1: Remove old side marker- There is a metal tab facing the wheel, depress and pull outwards.

Step 2: Remove screw holding fender liner and pull back gently

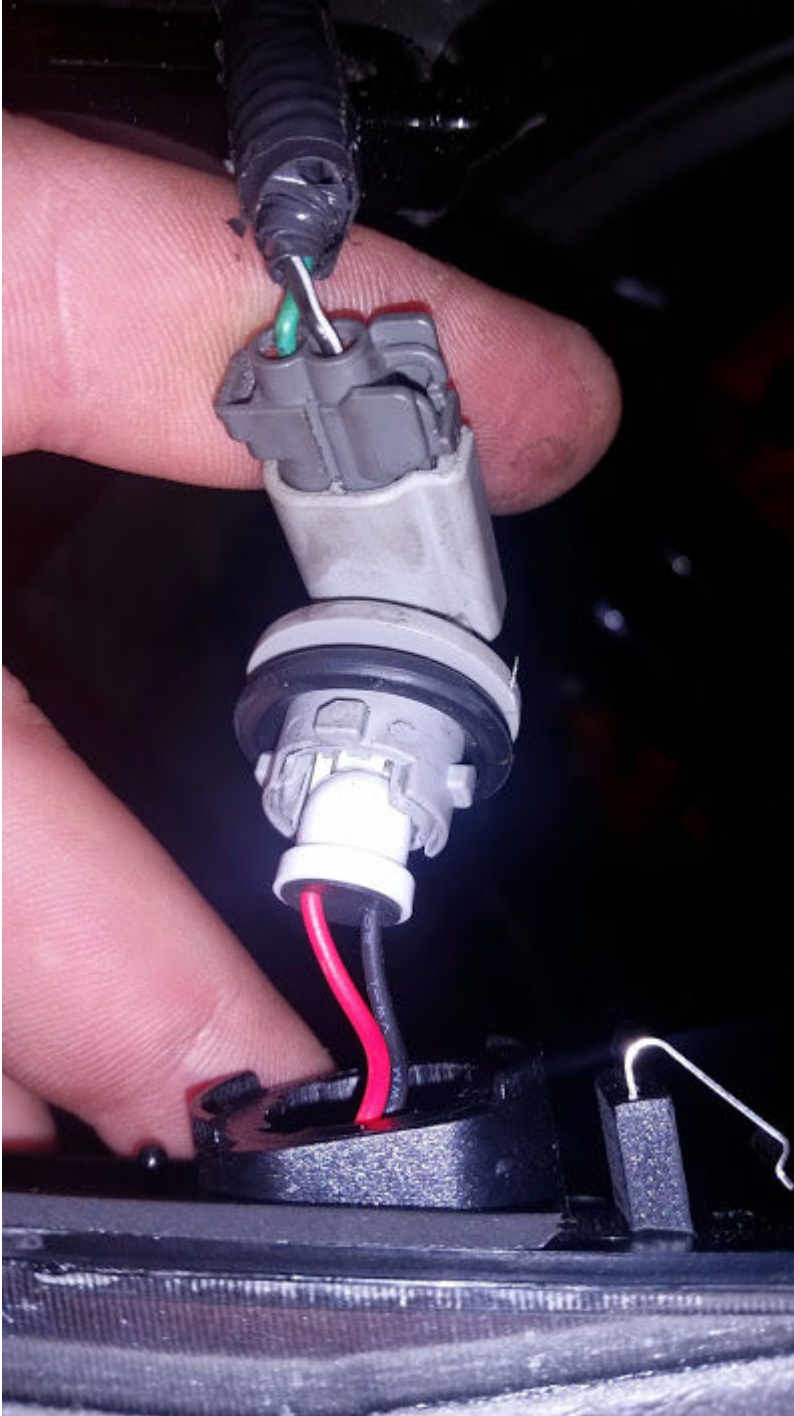

Step 3: Remove turn signal bulb assembly from headlight (top bulb)

Step 4: Feed single red wire from side marker bulb through front hole in fender, shorten by approx. 6" and use provided tap to connect to the Green/Black wire of turn signal holder (You can also solder the wire if preferred with own supplies)

Step 5: Turn on parking lights, connect adapter from new sidemarker into socket, if it does not illuminate turn 180 degree and plug back in.

Step 6: Reinstall turn signal bulb
Snap in side marker
Reinstall fender liner and screw
